

## Viafix in action: immediate heavy traffic

### Viafix makes light work of heavy traffic

When customers ask us how well Viafix performs in wet weather under immediate slow-moving traffic, we always assure them it will not rout or pluck out. Wakefield Highways took us at our word and put Viafix to the ultimate test under the wheels of a JCB and 28-tonne truck for good measure! Although they were understandably doubtful that it could work under these conditions, we challenged them to pick a pothole in the wheel-track at the entrance to their maintenance yard and give it a try. To simulate wet-weather conditions, the pothole was flooded with water then the Viafix applied. Immediately afterwards, one of Wakefield's JCBs drove over the repair (you'll note the tread of the tyres in the fourth picture above) and no rutting or plucking occurred. The 28-tonne truck also didn't do any damage, only further compacted the repair to leave a perfect and permanent finish (last picture above). Viafix – it's not cheap, it's cost effective.

Viafix is simple and easy to use even in wet and cold conditions and permanently fixes potholes on all classes of carriageway and reinstates utility cuts and ironwork surrounds. It offers skid and rutting resistance similar to that of hot bituminous materials. No special preparation is required simply remove any loose material and standing water from the damaged area.

### Viafix will massively reduce spend, risk and congestion due to defects.

- One visit permanent fix
- Works in wet weather
- Hot material performance
- Solvent-free
