

VIAFIX: Severn Bridge

Clear out loose material – standing water is not a problem

Level out Viafix (its superior pliability allows it to spread like hot mix).

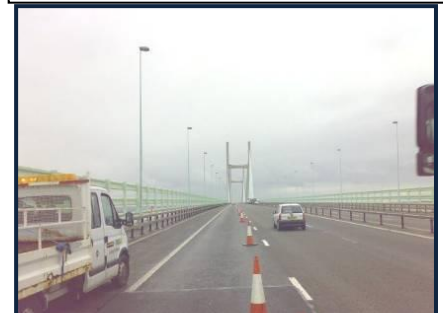

Add water to begin the curing reaction

Compact Viafix by hand, plate, or roller. Emergency repairs can be carried out simply by placing Viafix into the defect and allowing compaction from the traffic

Open road to traffic immediately

Viafix is perfect for repairing busy carriageways with little disruption.

Viafix is simple and easy to use even in wet and cold conditions and permanently fixes potholes on all classes of carriageway including bridges and bridge joints. It offers skid and rutting resistance similar to that of hot bituminous materials. No special preparation is required, simply remove any loose material from the damaged area, pour in Viafix straight from tub or bag, spread through area, apply water; compact down – then repaired area can be opened to traffic.

Viafix will massively reduce spend, risk and congestion due to defects.

- One visit permanent fix (no repeat repairs and resulting overheads needed)
- Works in wet weather (even constant, heavy rain and with surface water)
- Hot material performance (comparable ITSM, void content & rutting resistance)
- Solvent Free (no COSHH or Safety concerns)
