## Viatec UK Hotshot

This small and light hand held air lance has been designed as the ultimate solution to quick and efficient road marking removal prior to new road markings, joint preparation, surface drying and concrete cleaning.

Viatec's Compressed Air Equipment consists of a specially designed combustion chamber using a mixture of propane gas and compressed air. This gas and air mixture ignites and a blast of exhaust gas is emitted at a temperature of over 1000 degrees Celsius. The head is manufactured in high specification nickel which out performs stainless steel and nimonics. The Hotshot is smaller and lighter than most lances but it still generates 80% of heat produced by the larger lances. The new Hotshot is quieter than the conventional lances by approximately 25%, an important factor when used in built up residential areas. 100 decibels have been recorded 6 metres behind the lance and 115 decibels in front. The removal rate is approximately 800 linear metres (100m wide line) per 8 hour day which is naturally dependent on the line thickness and the size of the compressor. The lance is supplied in a wooden box for safe storage and transportation, complete with an integral mixer unit, 15 metres of supply hose, reverse flow check valves and regulator, ear defenders and gloves.
