

## VIATEC: Viasealant Spray – Aerosol Edge Sealer

Viasealant Spray is a bitumastic edge sealant in aerosol form with a high content of flexible bitumen. Designed for the jointing of vertical edges between tarmac, concrete and ironwork and as such is ideal for sealing utilities cuts and reinstatements. Viasealant is available in 600ml aerosol cans which will cover up to 30 linear metres at 6 cm width.

### Product benefits:

- Eliminates the need for brushes and buckets and as a result substantially reduces mess and does not generate waste
- Viasealant is stronger than the integral strength of the wearing course.
- It provides better coverage than older systems
- The material does not block valves, ensuring the maximum use of the material.
- Can also be used in extremes of temperature.

### Laboratory testing: Lancashire County Council Laboratory, 1994:

When used to seal a joint of hot rolled asphalt wearing course pressure was applied and the point of failure was adjacent to the joint and **not** the joint itself. For safety / COSHH sheet contact Viatec.
